

Spotlight Landing Page — Manager SOP

How to set up a creator's link-in-bio page in the link.me style.

~5–10 min

preview on a phone

1 · Gather These First

Collect from the creator (or their content folder) before opening the admin:

- **Profile photo** (square works best) — the avatar.
- **Hero image** — wide/tall banner shown big at the top. Use their best vertical shot.
- **Featured card image** — one standout photo for the "EXCLUSIVE CONTENT" card.
- **3–5 gallery photos** — thumbnails in a scrollable row.
- **@username** — the handle shown under their name.
- **Follower count** to display (optional) — e.g. **2.6K**, **18K**.
- **Their links** — socials (Instagram, X, TikTok, Reddit) and paid links (Subscribe, Custom content, Chat).

Image tip: Every image field needs a **URL** (web link), not a file upload. Upload the photo to your image host / CDN first, then paste the link. Use high-quality images — they fill the screen.

2 · Step-by-Step Setup

1. Open the creator

Admin → **Creators** → click the creator (or create a new one and fill name, avatar, theme first).

2. Set the theme accent color

On the **profile tab**, set the **Accent color** to the creator's brand color.

⚠ **Important:** The Spotlight page pulls its warm background glow and button gradients from this color. Pick a strong, on-brand color.

3. Switch the template to Spotlight

Click the **Spotlight** tab → under **Page Template**, change **Glass (default)** → **Spotlight (link.me style)**. The Spotlight Settings appear below.

4. Hero Image

Leave **Hero enabled** ON → paste the hero photo link into **Hero image URL**.

5. Name / Username / Followers

@Username — type the handle (the @ is added automatically). **Show follower count** — toggle ON if wanted. **Follower label** — e.g. **2.6K**.

6. Featured Card ("EXCLUSIVE CONTENT")

Card image URL — featured photo link. **Card label** — overlay text (default **EXCLUSIVE CONTENT** ; customizable, e.g. NEW DROP / VIP ONLY). **Card link URL** — where tapping it goes (usually their paid page).

7. Gallery Thumbnails

Click **Add thumbnail** for each photo (3–5). Per row: **Image URL** + optional **Link URL**. Use **X** to remove.

8. Add the Links

Go to the **Links** tab. For each: fill **Label** (e.g. Instagram, Subscribe — 50% off), pick an **Icon**, paste the **URL**, set badges (HOT/VIP) or sensitive flag. Socials become the round pills; paid links become the big buttons.

9. Save

Scroll down → click **Save**.

10. Preview & Verify (on a phone)

- ☐ Hero photo loads & looks good (not stretched/pixelated)
- ☐ Name, @username, follower count correct
- ☐ Social pills appear with right icons
- ☐ Featured card shows image + label, tap goes to the right place
- ☐ Gallery scrolls sideways; last thumbnail "peeks" (intentional)
- ☐ Paid buttons (Subscribe / Custom / Chat) work

3 · Troubleshooting

Problem	Fix
Hero / featured / gallery image is blank	URL is wrong or host not allowed. Re-upload to the approved image host and paste a fresh public link.
Background glow looks off / wrong color	Fix the Accent color on the profile tab — the glow derives from it.
Follower count not showing	Toggle Show follower count ON and fill the Follower label .
Page looks like the old style	Still on Glass — switch Page Template to Spotlight and Save.
Want the old look back	Switch Page Template back to Glass (default) and Save. No data is lost.

4 · Good to Know

- **Glass vs Spotlight** coexist. Switching is non-destructive — links/content stay, only the layout changes.
- **Everything is per-creator** — colors, hero, featured card, gallery, and links are all set individually.
- **Live demo layout:** **/demo-spotlight** on the preview build (mock data).
